

## Autoclavable Letterhead

*(When conducting bacteriology and or chemical reaction testing.)*

When your custom documentation requires an autoclave protocol, our unique R-I-R paper is created for applications requiring water-resistance and the ability to be written on when wet. It can be copied on, laser printed, or sterilized in an autoclave.

In response to new FDA requirements for pharmaceutical companies, we will print your company logo, and a watermark, on the front of each sheet. A blank version is also available. Our R-I-R letterhead will withstand the pressure and steam required to sterilize and keep the paper free of microorganisms and biological contaminants (270° F, 30 PSI).

R-I-R is not a plastic. There is no risk of melting in your autoclave or copy machine!

**For more information or to receive samples phone: (503) 232-2212 Ext. 12**

**Additional features:** Exceptional thickness and strength. High opacity and “Class 10” certified. Customization available for your unique application.

---

Our “CLASS 10”® stationary products are manufactured from the highest quality clean room compatible materials, then cleaned and double packaged under “Class 10” or better conditions.

Columbia Printing & Cleanroom is America’s largest producer of clean room stationary consumables. Since 1999, Columbia Printing & Cleanroom has lead the field in producing custom and private label “ Class 10” stationary consumables.

If you have any questions or would like to **receive digital product data sheets, please phone (503) 232-2212 (Ext.12)**
